

CENTURY

A NEW WORLD

Centuries ago, the spice trade was the most important market in the world. It established and destroyed empires, compelled men to explore the far corners of the earth and led to the discovery of new worlds.

GAME SETUP

To set up a game of *Century - A New World*, follow these steps in order:

1. From the Location boards **A**, retrieve out the boards A1, B1 and C1. Now retrieve **one** of the boards D1, E1 or F1, and return the other two to the box. Then create the game board by placing the four boards in the middle of the table as shown above **B**.

2. From the Point cards **C**, remove all cards that have a white star ☆ on their bottom left corner and return them to the box. If you play with less than 4 players, you will remove cards based on the player count: In a 2-player game, remove all cards with a "3+"- and "4"-mark in their bottom right corner. In a 3-player game, remove all cards with a "4"-mark. Afterwards, shuffle the Point cards and place one at random above each Fort location at the top of the game board face up. Place the remaining cards as a face-up draw deck **D** close by.

3. From the Bonus tiles **E**, remove all tiles that show the icons **I** or **III** at their bottom and return them to the box. Shuffle the remaining 17 Bonus tiles and place a stack face-up onto each bonus space **F** on the game board. Every stack includes as many random Bonus tiles as the number on that space states. Return any spare Bonus tiles to the box.

4. Shuffle the ten Exploration tiles **G**. At random, place one tile face up onto every location that has an Exploration icon on it. In a 2- and 3-player game, place one of the remaining two Exploration tiles onto each location that is marked with a 2-3 icon.

In a 4-player game, return the two remaining Exploration tiles to the box, leaving the locations with an 2-3 icon uncovered.

5. Retrieve a player board **H** for each player. Make sure the one with the first player symbol ☆ is included. Shuffle them and place one in front of each player with **side A** facing up. The player with the first player symbol will be the start player.
6. Each player chooses a player color and takes the 12 settlers of that color. They then place six of them on their player board **I** (seven in a 2-player game). The remaining settlers are placed as a reserve to the left of their player board **J**. These are not available to the players yet.
7. Next to the game board, put the cubes into the bowls separated by colour **K** and arrange those 4 bowls in an ascending order: yellow (corn) ► red (meat) ► green (tobacco) ► brown (fur).
8. Based on player turn order, each player will receive the following quantity of cubes and place them in the storage **L** on their player board:
 - ♦ 1st player > 3 yellow cubes
 - ♦ 2nd player > 4 yellow cubes
 - ♦ 3rd player > 4 yellow cubes
 - ♦ 4th player > 3 yellow cubes and 1 red cube

TAKING A TURN

Century - A New World is played over a series of rounds. Each player will take **one** turn each round (starting with the first player and going clockwise).

On your turn, you must perform 1 of the following actions:

- ♦ **Work:** Use one location of the game board by placing the required number of settlers there.
- ♦ **Rest:** Return all your settlers from the game board to your player board.

WORK

Choose **one** location on the game board.

You can choose any location that has **neither** an Exploration tile **nor** your **own** settlers on it.

Then:

- a) place the required number of settlers on that location **and**
- b) use that location's action(s).

a) Placing settlers on a location:

Take the **required number** of settlers from your player board and place them onto the chosen location. The required number is determined as follows:

- If the location is not occupied by any settlers, place as many settlers there as shown at the location's bottom.
- If the location is already occupied by any number of settlers of **another** player, you must oust those by placing the same number of settlers there **plus one additional settler**. Then return the ousted settlers to their owner's player board.

*Example: If Tom wanted to use location **A**, he would have to place 1 settler from his player board there. If he wanted to use location **B**, he would need to place 4 settlers from his player board there and return the 3 blue settlers to the player board of their owner.*

Note: Due to benefits of Native Help cards, it may happen that a location is occupied by fewer settlers than the number on the location's bottom shows.

b) Performing the location's action(s):

After you have placed your settlers on the location you must perform the action according to its type immediately.

There are 4 basic types of locations:

Production locations, where you gain specific cubes from the supply.

Upgrade locations, where you upgrade goods in your storage to goods of a higher level.

Trade locations, where you exchange specific goods from your storage for other ones from the supply.

Fort locations, where you may exchange cubes to claim that location's Point card or take one Bonus tile or both.

A detailed description of how to use each type of location can be found in the section "Basic locations" on the OVERVIEW SHEET.

An overview and explanation of the benefits of Point cards and Bonus tiles can also be found on the OVERVIEW SHEET.

REST

If you cannot or do not want to use a location on your turn, you must instead collect all of your settlers from the game board and place them back onto your player board.

STORAGE LIMIT

At the end of any turn, if you have more cubes in your storage than spaces available, you must return cubes of your choice to the supply until you reach your storage limit of 10 cubes.

CUBE SUPPLY LIMIT

The cube supply is considered unlimited. If a supply should be exhausted, use something else as a substitute.

GAME END

Once a player claims their 8th Point card, finish the current round of play. Then the game ends. At that point, players count all their points from:

- ♦ Their Point cards

- ♦ Bonus tiles they have gained during the game (see section "Bonus tiles" on the OVERVIEW SHEET for how to score them)

- ♦ Exploration tiles they have gained due to certain Point cards (see section "Point cards" on the OVERVIEW SHEET)

- ♦ Remaining cubes in their storage: Each non-yellow cube is worth 1 point.

The player with the most points wins. If there is a tie, the tied player who was last to take a turn wins.

OVERVIEW SHEET

BASIC LOCATIONS

Production locations:

Take the cube(s) depicted in the center of the location from the supply and add it(them) to your storage.

Upgrade locations:

For each grey cube depicted in the center of the location, you **may** upgrade 1 cube from your storage to the next level by returning it to the supply and taking a cube of the next level in exchange. You may upgrade the same cube multiple times.

Trade locations:

Perform the trade shown in the center of the location as many times as you like (at least once): For each time you perform that trade, return the cube(s) shown above the arrow from your storage to the supply to take the cube(s) shown below the arrow from the supply and add them to your storage.

Fort locations:

On a Fort location, you can choose to perform either **one or both** of the following actions:

- Take the **top** Bonus tile of this Fort location's stack (if available) and place it onto an **empty** bonus space on your player board. (If there are two stacks on this location, choose the top tile from one of them.) Once all three of your bonus spaces have a Bonus tile each, you can not gain any more Bonus tiles. (See section "Bonus tiles" on the right for how to score points with them at game end.)
- Claim the Point card above this Fort location by returning the cubes stated at the bottom of the card from your storage to the supply. Then place the card beside your player board. (If you already have one or more Point cards there, form an overlapping row in which only the top part of each card is visible.) After acquiring a Point card, fill the empty slot by sliding the cards to the left, creating an empty slot just to the left of the Point cards deck; then draw a card from the deck to fill that empty slot.

Each Point card shows one of the 4 New World Icons and gives you either an immediate or a permanent benefit. In addition, each Point card is worth points at the end of the game as indicated at the bottom of the card.

POINT CARDS

There are 4 types of Point cards, each marked by a New World Icon in its upper right corner.

Native Help cards have the following permanent benefit: Whenever you use a location that includes the depicted icon in the circle, the required number of settlers you need to place on this location is reduced by 1. If you have several cards of the matching symbol, each of them reduces the required number by 1. However, you must always place at least one settler.

Tool cards have the following permanent benefit: Whenever you use a location that includes the depicted icon in the circle, you gain the depicted cube immediately, before performing that location's action. If you have several cards of the matching symbol, each of them gives you that additional cube.

New Settler(s) cards have the following immediate benefit: When claiming the card, take the shown number of settlers from your reserve and place them on your player board. If you have no settlers left in your reserve, you must forfeit that benefit (but you still can claim that type of card).

Exploration cards have the following immediate benefit: When claiming the card, take one Exploration tile from the game board and place it in front of you. If it shows an immediate bonus, gain that bonus now. By removing the Exploration tile, you have uncovered a new location which can be used by all players from now on.

Bonuses of the Exploration tiles:

Immediate bonus: Gain the depicted cubes from the supply.

Immediate bonus: Add one settler from your reserve to your player board.

Game end bonus: 3 points.

Game end bonus: 1 additional New World Icon when scoring Bonus tiles.

BONUS TILES

Most of the Bonus tiles show a specific requirement. When you score them at game end, check for each Bonus tile individually how many times you have met its requirement. For each time it is met, you gain the points depicted on its bottom.

Gain 2 points for each depicted New World Icon you collected (Point cards and Exploration tiles).

Gain 3 points for each pair of the depicted New World Icons you collected (Point cards and Exploration tiles).

Gain 1 point for every 2 settlers you collected. This applies to all of your settlers that are on your player board or the game board (those in your reserve do not count).

Gain 3 points (no requirement).

Example:

At game end, Tom has the following 7 New World Icons:

His 3 Bonus tiles give him 18 points in total.
